**NMS COMMUNICATIONS DEMONSTRATES SAYTEXT AUDIO SMS FROM  
UREACH TECHNOLOGIES AT SPRING VON**

**HOLMDEL, NJ – March 16, 2007** – uReach Technologies will be demonstrating its sayTEXT™ Audio SMS product powered by NMS Communications' Open Access at the Spring VON 2007 Conference & Expo. The demonstrations will take place at the NMS booth #1019. This powerful new application allows mobile users to send personalized and pre-recorded audio clips to each other using SMS.

Key features of the uReach sayTEXT™ Audio SMS solution, include:

- **No special handset or phone client is required** – The sayTEXT™ Audio SMS solution will work with all current mobile handsets in market.
- **Allows Texting Without Typing** – Allows users to speak messages instead of typing on alpha-numeric keypads.
- **Supports Multimedia Distribution Lists** – Users can create distribution lists to SMS, MMS, email, IM, AudioSMS and text-to-landline destinations.
- **Language Independent** – Allows users to speak in whatever language they like instead of typing on phones that may not offer the character support they require.
- **Drives Calls and Messages** – Unlike other messaging services, sayTEXT™ can drive both voice and data traffic for the service provider.

The sayTEXT Audio SMS product was developed for use with the uReach Converged Service Framework. Leveraging a standards-based software architecture utilizing NMS' Open Access,

uReach's Converged Services Framework (CSF) was designed from the ground up to meet service providers' stringent requirements for reliability and availability, while remaining cost-effective to deploy and operate.

SaskTel, the leading full service communications company in Saskatchewan, selected the combined uReach and NMS Audio SMS solution in September 2006. Since that time, interest has grown in the service. Currently, several Tier 1 providers in the United States and Canada have launched trials of the application.

### **About uReach Technologies**

uReach Technologies, Inc is the leading provider of converged communication solutions for the service provider market. The uReach Converged Services Framework (CSF) offers a standard-based and IMS-compliant approach for uniformly deploying value-added voice and data services across wireless, wireline and IP properties quickly, economically and in scale.
